SUMMARY

High school student and independent developer, studying in Tel Aviv University's Artificial Intelligence and Data Science program alongside school. I run Magicelk Labs, a Mac app studio, where I own the code, the design, the site, and the distribution. I wrote a compiler in assembly for my own language that emits x86-64 machine code, and a 2D online open world game in Python. I work with AI coding agents daily and know which parts to write by hand.

EDUCATION

High school	Eleventh grade Majoring in cyber, computer science, and physics.
Tel Aviv University	Artificial Intelligence and Data Science program Academic program for high school students, running parallel to school. Completed calculus, linear algebra, and statistics. Data science next semester.
Self taught	Systems programming, compilers, and macOS development, learned through the projects below.

MAGICELK LABS

2026, ongoing	Founder and sole developer Independent studio for Mac applications. Full cycle: code, design, website, packaging, notarised distribution, and support. Two products released.
Viaduct	Converts a Chrome extension into a signed Safari web extension without opening Xcode. A JavaScript command line tool plus a Swift macOS app that wraps it. 47 GitHub stars across the two repositories.
Spyglass	Real Quick Look previews for Google Workspace files on macOS. Press Space on a .gdoc and read the document instead of the JSON stub on disk. Written in Swift as a Quick Look extension.

SELECTED PROJECTS

HoLyC++, 2025	A compiled language targeting x86-64 Linux. The compiler is written in NASM, 4,284 lines, with 12 standard library modules, and emits native machine code through NASM and ld.
Worldspawn, 2024	A 2D online open world game in Python. Generated world across four biomes, mining, farming, crafting and combat, 83 creatures and 143 items, multiplayer over TCP sockets.
NASM extension, 2026	VS Code extension for NASM x86-64. Macro aware highlighting, hover documentation for 684 instructions and directives, and cross file label completion. Published on the Marketplace.

TECHNICAL SKILLS

Languages	x86-64 assembly, Python, C, C++, Swift, TypeScript, JavaScript, Java, C#, Bash
Technologies	React, Node, NASM, CMake, Docker, Git, Linux, macOS, Pygame
Fields	Compilers and systems programming, developer tools, macOS applications, game development, cyber
Agent workflow	Daily work with Claude Code: project rules and context, MCP servers and skills, tasks split small, and review of everything the agent produces. Fast prototyping with a model, hand written code where correctness and performance matter.

LANGUAGES AND INTERESTS

Spoken	Hebrew, native. English, fluent.
Interests	Complex systems design, skiing, hiking, tennis.
